RECEIVED
APR 23 2002
Technology Center 2100

22. (New) A method of processing a set of executable instructions, comprising:
receiving input data associated with a call to the set of executable instructions;
separating the input data into a plurality of job quanta, wherein each job quantum is operable to
be independently processed by the set of executable instructions; and
submitting at least one job quantum for execution to a substantial copy of the set of executable
instructions, and submitting a different job quantum for execution to the set of executable
instructions, wherein the substantial copy of the set of executable instructions and the set of
executable instructions reside on different processing elements.

23. (New) The method of claim 22, further comprising assembling output data from the
execution of the substantial copy of the set of executable instructions and from the set of
executable instructions into a single presentation data.

24. (New) The method of claim 22, further comprising executing the substantial copy of the set
of executable instructions and the set of executable instructions substantially in parallel.
